Banking Dataset Exploratory Analysis

Key insights from comprehensive analysis of 3,000 client records across demographics, product holdings, and financial behaviors

Dataset Foundation: Pristine Quality

Complete Coverage

Our analysis examined a robust dataset of **3,000 client entries** spanning 25 distinct variables. The data quality is exceptional, with zero missing values across all fields, ensuring reliable insights and accurate pattern identification.

This completeness allows for confident statistical analysis and meaningful segmentation across all customer dimensions.

Client Demographics Overview

51	50.4%	43.6%	195
Average Age	**Female Clients**	**European Nationality**	**Unique Occupations**
Years old across client base	Perfectly balanced gender distribution	Largest geographic segment	Highly diverse professional backgrounds

The client base demonstrates remarkable diversity across age, gender, and professional backgrounds, with near-perfect gender parity and representation from multiple continents.

Income Distribution Across Client Base

Medium Income

50.6% of clients

£100k - £300k annual income bracket forms the core client segment

Low Income

34.2% of clients

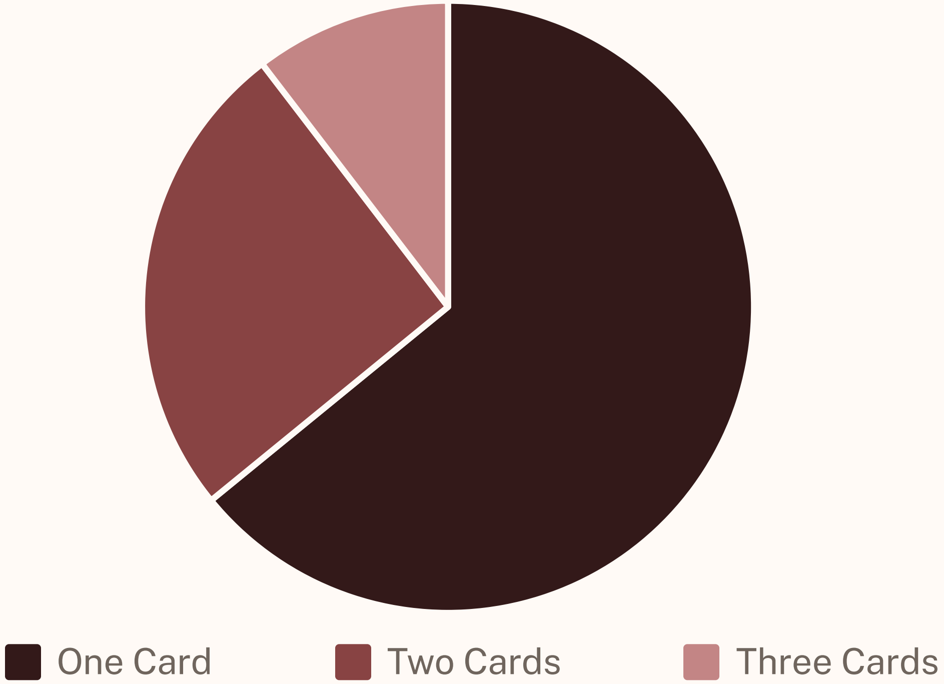
Below £100k represents significant opportunity segment

High Income

15.2% of clients

Above £300k represents premium client tier

Product Holding Patterns



Single Product Dominance

Nearly **two-thirds of clients** maintain only one credit card, suggesting significant cross-selling opportunities exist within the current client base.

Only 10.4% of clients maximise their product portfolio with three cards, indicating room for strategic product expansion initiatives.

Client Segmentation Insights

Loyalty Classification

Jade tier dominates at 44.4% of clients, followed by Silver (25.6%). Platinum clients (10.6%) represent an exclusive minority with premium service expectations.

Property Ownership

Remarkably even distribution across all categories, with 23-26% of clients in each bracket (0-3 properties), suggesting diverse wealth accumulation strategies.

Risk Profile

Low-to-moderate risk dominates: 40.7% classified as Risk Weighting 2, with 27.9% at Risk Weighting 1, indicating a generally stable portfolio composition.

Gender Analysis: Minimal Disparity

Income, fees, and loyalty show no gender skew

All major financial classifications maintain a balanced 47-53% split between male and female clients, demonstrating equitable access to financial products and services.

Occupation reveals notable gender patterns

Female-dominated roles include Nurse (91.7%) and Design Engineer (82.4%), whilst male-dominated positions include Database Administrator IV (77.8%) and Nuclear Power Engineer (76.5%).

Minor variations in property and loyalty tiers

Male clients slightly more likely to own 2 properties (52.4%), whilst female clients marginally more represented in Platinum loyalty tier (53.3%).

Financial Behaviour Correlations

Bank Deposits

Primary financial indicator

Checking Accounts

0.84 correlation

Savings Accounts

0.75 correlation

The strongest relationship identified: clients actively manage their deposits, moving funds into both checking and savings accounts. This behaviour indicates engaged, financially savvy customers rather than passive account holders.

Key Correlation Discoveries

Income: Surprisingly Weak Driver

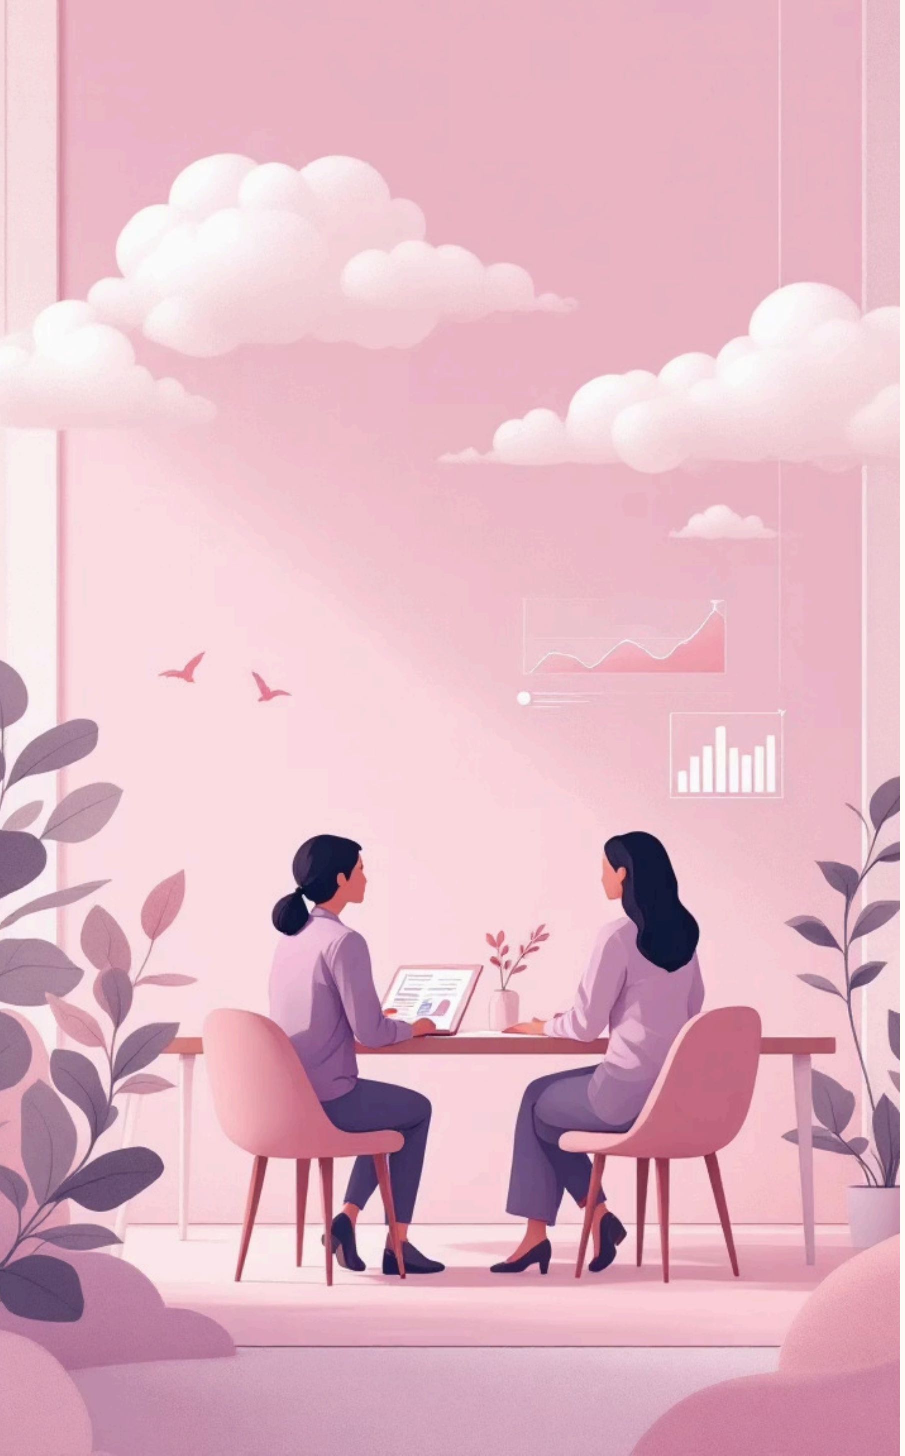
Estimated income shows only **weak-to-moderate correlation** (0.26-0.37) with financial variables. The strongest relationship is with superannuation savings (0.37).

Income alone does not predict loan amounts or deposit balances, suggesting other factors drive financial engagement.

Positive Activity Breeds More Activity

All financial metrics show positive correlations — no trade-offs exist. Business lending correlates moderately with bank loans (0.42).

Clients with higher balances in one area tend to demonstrate elevated activity across all financial products.



Strategic Recommendations

01

Expand product penetration amongst single-card holders

Target the 64% holding one card with tailored cross-selling campaigns

02

Leverage deposit-to-account correlation patterns

Develop products that encourage active fund management behaviours

03

Focus beyond income as primary segmentation variable

Incorporate behavioural and engagement metrics into targeting strategies

04

Create occupation-specific financial product bundles

Address unique needs of diverse professional backgrounds
